1. Catalog Description: _Credits:_ 4. Theory and application of vector, matrix and other numerical methods to systems problems. Simultaneous linear equations, characteristic values, quadratic forms, error analysis, use of series, curve fitting, nonlinear equations, discrete methods. The laboratory sessions will emphasize numerical solutions using MATLAB.

2. Pre-requisites: MAC 2313, MAP 2302

3. Course Objectives:
   - Understanding the concepts behind the techniques presented in the course
   - Developing facility with the techniques themselves, and being able to solve small size problems analytically
   - Learning how to implement the methods in the MATLAB programming environment (ability to program in at least one high level language such as C, C++, FORTRAN, Pascal, etc. will be useful, but is not a requirement)

4. Contribution of course to meeting the professional component: This course teaches the basic concepts in the theory and applications of vector, matrix and other numerical methods to systems problems. Students will develop and enhance their ability to address various problems applying numerical methods and modern software (MATLAB).

5. Relationship of course to program outcomes: This course meets ABET requirements in the following ABET criteria: apply knowledge of mathematics, science and engineering; design and conduct experiments, as well as to analyze and interpret data; identify, formulate and solve engineering problems; understand the impact of engineering solutions in a global and societal context; recognize the need for, and engage in life-long learning; understand contemporary engineering issues; use the techniques, skills, and modern engineering tools necessary for engineering practice; integrate systems using appropriate analytical, computational and experimental practices.

6. Instructor: Petar Momčilović
   a. Office location: 479 Weil
   b. Telephone: (352) 392-1464 x2053
   c. E-mail address: petar@ise.ufl.edu
   d. Web site: www.ise.ufl.edu/momcilovic/
   e. Office hours: TBA

7. Teaching Assistant: TBA
   a. Office location:
   b. Telephone:
   c. E-mail address:
   d. Office hours:

8. Meeting Times: MWF 7, T 10-11

9. Schedule: Lectures – MWF 7; Lab sessions – T 10-11
10. Meeting Location: FLG 0245

11. Material and Supply Fees: none

12. Textbook
   a. Title: Introduction to Numerical Analysis Using MATLAB
   b. Author: Rizwan Butt
   c. Infinity Science Press, 1st edition

13. Recommended Reading: none

14. Course Outline:
   • Numbers and errors
   • Logic: Use of logical operators
   • Proof by induction
   • Algorithms: Basic concepts
   • Solution of linear systems
   • Solution of nonlinear equations
   • Polynomial interpolation
   • Numerical integration
   • Numerical solution of ordinary differential equations
   • Eigenvalues and eigenvectors
   • Introduction to optimization
   • Introduction to graph theory
   • Other topics – time permitting

15. Attendance and Expectations: No attendance will be taken, but you are responsible for the announcements made in class. Students are expected to know the material covered in the prerequisite courses. When necessary, they are expected to relearn material from these courses on their own.

   Homework is important, and will be counted enough towards the course grade that you take it seriously, but not so much that you cannot afford to make mistakes. Late homework will not be accepted, except in extenuating circumstances such as serious illness.

   This is not a course where you can do well on exams solely by blindly applying formulas. In order to get the most out of the course, try to stay ahead. By the weekend, make sure you have at the least reviewed the material covered in the lectures and readings of the preceding week. In addition to reading, working out extra exercises on your own will help in improving your understanding of the material. With diligent practice, you can prepare yourself to the point where, on exams, instinct takes over and the problems seem straightforward.

16. Grading: 10% homework, 30% midterm 1, 30% midterm 2, 30% final.

   Exams: 2 midterms on October 5 and November 9 (Wednesdays, evening exams), and a final on December 15, 2011 (Thursday) at 5:30 PM.
If you disagree with any grade you received for an assignment, please talk to the TA who graded this problem/assignment. If you still disagree with your grade after talking to this person, you may contact the instructor. Before contacting the TA or the instructor, please make sure that there are sufficient grounds for appealing the grade and present a clear explanation and specific reasons why you believe your grade should be changed.

17. Grading Scale: The final letter grade will be determined primarily by the curve. The break between “B” and “B-” will be approximately set at the average. Letter grades will be monotonic in total course scores. **Your grade will be solely based on your performance in this course and not on outside factors like your wish to graduate this semester.**

A C- will not be a qualifying grade for critical tracking courses. In order to graduate, students must have an overall GPA and an upper-division GPA of 2.0 or better (C or better). Note: a C- average is equivalent to a GPA of 1.67, and therefore, it does not satisfy this graduation requirement. For more information on grades and grading policies, please visit: [http://www.registrar.ufl.edu/catalog/policies/regulationgrades.html](http://www.registrar.ufl.edu/catalog/policies/regulationgrades.html)

18. Make-up Exam Policy: You are expected to be present without exception and to plan any travel around these dates accordingly. Medical emergencies are of course excluded if accompanied by a doctor’s note.

19. Honesty Policy: All students admitted to the University of Florida have signed a statement of academic honesty committing themselves to be honest in all academic work and understanding that failure to comply with this commitment will result in disciplinary action. This statement is a reminder to uphold your obligation as a UF student and to be honest in all work submitted and exams taken in this course and all others.

All homework assignments are to be completed on your own. You are allowed to consult with other students during the conceptualization of a solution, but all written work, whether in scrap or final form, is to be generated by you working alone. You are also not allowed to use, or in anyway derive advantage from, the existence of solutions prepared in prior years.

Any form of cheating will be penalized.

20. Accommodation for Students with Disabilities: Students Requesting classroom accommodation must first register with the Dean of Students Office. That office will provide the student with documentation that he/she must provide to the course instructor when requesting accommodation.

UF Counseling Services: Resources are available on-campus for students having personal problems or lacking clear career and academic goals. The resources include:

- UF Counseling & Wellness Center, 3190 Radio Rd, 392-1575, psychological and psychiatric services.
- Career Resource Center, Reitz Union, 392-1601, career and job search services.

21. Software Use: All faculty, staff and student of the University are required and expected to obey the laws and legal agreements governing software use. Failure to do so can lead to monetary damages and/or criminal penalties for the individual violator. Because such violations are also against University policies and rules, disciplinary action will be taken as appropriate. We, the members of the University of Florida community, pledge to uphold ourselves and our peers to the highest standards of honesty and integrity.
